DESCRIPTORS: *Gas flow, *Pistons, *Detonations,
Shock waves, Equations of motion, Velocity,
Reynolds number, Pressure, Mathematical analysis.

The present paper attempts the solution of the problem involved in a strong detonation, taking into account the explosion of air by the products of the detonation. The basic assumption consists in the following: the motion of the gaseous masses is given shape by the expansion of the sphere (a spherical piston), the radius of which grows in accordance with the law $Ct^n + 1/(n+1)$, where C and n are constants.
